Men in general have a rather limited view of their own sexual pleasure. First and foremost, many are locked in a narrow mindset that defines sex as them putting their penises into women and that's that. There may be some oral sex going on or maybe even some fantasies about anal sex, but that's about it. This is as far as it goes.

And it's hard to understand such an attitude because there is so much more men could do with their bodies to enhance their sex lives and experience that glowing feeling of well-being that a satisfied and relaxed person gives out. Tantric sex can help men achieve multiple orgasms. It seems so simple and logical to think that most men would actually want to try something like this; at the very least to see if it's possible.

Wouldn't it be wonderful to know that each time you're having sex you're drawing closer to your partner in your soul and also that you are bound for one of the most incredible experiences human beings are capable of? You'd think that men would jump at this in half a second. Strangely, they don't. Probably because they don't trust the concept and think that multiple orgasms are a myth.

Well, hold on! Maybe they don't have all the facts. It must be said that orgasm has a different function in Tantric sex. It is not the ten-second climax of a five-minute effort, but an entirely new physical and emotional state which makes the man more aware of himself and of his partner. Imagine the profound union of lovers who can share this amazing state of pleasure, the feeling of intimacy and the tremendous energy sweeping through the body.

One of the best features of the Tantric multi-orgasmic techniques is that they do not leave the man spent and exhausted, but full of energy and refreshed because no ejaculation is involved. The Eastern masters of Tao and Tantra say that ejaculation drains the man of his vital energies and that the purpose of Tantra is to reach and maintain the state of orgasm for as long as the man pleases without ejaculating.

This is the secret to the prolonged orgasmic state experienced by those who practice Tantric sex: the fact that the body produces a tremendous amount of energy during orgasm and that this energy does not have to be expended through ejaculation, but can be used to energize and rejuvenate the entire body.

Such an idea may sound far-fetched, but it's been practiced for centuries in the Far East. Orgasms that last for days are not unheard of in Tantra circles. Men who are used to the customary ten seconds of pleasure are bound to be more than a little suspicious about such claims, but that doesn't change facts. The Tantric orgasm is a new way to look at pleasure.

Because the state of orgasm lasts so long, people can gain a unique awareness of pleasure and can start to notice various subtleties that cannot be imagined when all you've ever known is a quick release before turning over and saying "Boy, that was great. Good night, dear". Think about it: orgasm doesn't have to be this way.
